Person Centred Technology in the workplace

Cardiff Bay, Wales, UK

Wednesday 22 June 2011

Technology Works is a European conference that will examine the use of Person Centred Technology (PCT) in the workplace.

Having a job is important to people on many levels; it increases income, independence and self-worth. However many disabled people are denied these opportunities by the barriers that can prevent them entering and maintaining employment.

The person-centred use of technology can ensure disabled people reach their full potential in work and greatly increases employment possibilities for disabled people and employers.

Technology Works will:

- **explore the significance, issues and application of Person Centred Technology in employment and vocational training settings;**
- **showcase good practice, highlight policy and practice issues in Wales and the UK;**
- **offer delegates the chance to share and discuss their experiences and views.**

The conference will be of interest to disabled people, advice and support agencies, supported employment agencies, commissioners, service providers, employers and trade union representatives.

ImPaCT in Europe - Improving Person Centred Technology in Europe

Technology Works is part of **ImPaCT in Europe**, a 3 year project partnership to facilitate the development and introduction of Person Centred Technology in Europe. The project is sponsored by the European Commission's Lifelong Learning Programme. For more information visit www.impact-in-europe.eu

What we mean by Person Centred Technology

Person Centred Technology is technology that supports an individual or their carer to gain greater control in achieving independence and safety. It includes, but is not limited to, Electronic Assistive Technologies, Environmental Controls, Telecare, Telehealth and Information and Communication Technology (ICT).
